### BUILT FOR EXTREME CONDITIONS

The compact N-TRON® 7012FX2 fully-managed industrial Ethernet switch is ideal for industrial and utility applications that demand extreme performance under harsh conditions. Housed in a rugged industrial metal enclosure, the switch offers a powerful combination of eight 10/100BaseTX copper ports, two 100Base fiber ports, two SFP gigabit ports, and redundant power inputs for robust network support. The device boasts exceptional MTBF and extended tolerances to shock, vibration, temperature fluctuations and noise—common elements in factory floor control networks, utilities, wastewater treatment, wind turbines, rail car, intelligent traffic control and transportation applications.

### ADVANCED RING TECHNOLOGY

Advanced N-Ring technology provides expanded capacity, detailed fault diagnostics, and fast ~30ms healing time for N-TRON-based rings. The integrity of the ring is continually checked by sending heart beat packets around the network. If an error is detected, the ring converts to a linear topology within ~30ms and communication is immediately restored. A detailed ring map and fault location chart may be accessed by the ring manager's web browser or the OPC server. Each N-Ring accommodates up to 250 fully-managed N-TRON switches. To establish redundancy, N-Link technology easily connects multiple N-Rings, creating additional pathways to critical applications and increasing overall resiliency.

### MONITORING OPTIONS

N-TRON provides multiple tools to monitor the 7012FX2. The robust web-based interface provides a convenient dashboard to view and configure switch options, as well as monitor network traffic, alarms, and trend information. For tightly controlled environments, N-View OPC server software easily combines with HMI control and monitoring applications to form a complete surveillance solution for N-View-enabled switches. The iSNMP Software Suite is also available for link and status monitoring. For local monitoring, each switch features configurable LEDs to indicate power failure and N-Ring status.

### EASY TO USE

The 7012FX2 features auto-sensing and auto-configuring 10/100BaseTX ports. Each copper port automatically negotiates for maximum speed and performance but can be hardcoded through the user interface. A high-speed processor allows wire speed capability on all ports simultaneously.
