cifX

PC cards for Real-Time Ethernet and Fieldbus

- **○** All common PC card formats
- All major industrial protocols
- One hardware for all Real-Time Ethernet protocols
- Master and Slave
- Wide range of device drivers
- \bigcirc Same application interface for all networks

PC cards in all formats for all protocols

The cifX PC card family is the unified standard supporting all Real-Time Ethernet and Fieldbus systems for PC based automation.

The protocol stack is executed autonomously on the PC card and process data exchange with the host is done via Dual-Port-Memory or DMA (Direct Memory Access). Thanks to the common Hilscher Platform Strategy all PC cards use the same drivers and tools - independent of protocol and card format. Thanks to the netX technology there is exactly one hardware needed for the realization of all Real-Time Ethernet protocols. A change of the communication protocol is done by just loading a different firmware.

Always the right solution! Different cable lengths, M-12 connectors, additional NVRAM, extended temperature range, 2-channel cards or detached network interfaces – numerous hardware options always offer the right solution for your application. On top, a wide range of device drivers and a C-Toolkit, free of charge, are available.

The PC based automation is evolving and the Hilscher cifX PC card family keeps the pace. With continuous expansion for new standards, protocols and formats, as M.2, mini PCIe halfsize or CC-Link IE Field, customers are always prepared for new market demands.

Platform Strategy

Same API, same driver, same tools for all card formats & protocols

Hardware-Options

• Extended temperature

For the usage in high temperature environments, all cifX cards support an extended temperature range

Additional NVRAM

Mini PCI Express and Low Profile PCI Express types can be ordered with an additional NVRAM for 128 kByte remanent data

Rotary Switch

A rotary switch on PCI, PCI Express and Low Profile PCI Express cards allows an easy and reliable slot assignment

• 2-Channel Cards

For compact systems with limited internal slots, 2-channel cards are available

Detached network interface

• AIFX-RE with RJ45 connectors

PCI-104, PC/104, mini PCI, mini PCI Express, mini PCIe halfsize and M.2 cards come with a detached network interface, which is equipped with RJ45 connectors

• AIFX-RE\M12 with M12 connectors

Alternatively, all cards with a detached Real-Time Ethernet network interface are available with D-coded M12 connectors

Different cable lengths

For flexible mounting the detached network interface can be delivered with cable lengths of 15 or 20cm for Real-Time Ethernet and 15 or 30cm for Fieldbus

UNIQUE DIVERSITY & SIMPLICITY - FOR ALL USE-CASES

Universal PC card for Master & Slave

Hilscher's PC cards cifX are based on the multiprotocol chip netX 100 and are designed as so called universal cards. Means the same card can be used as Master or as Slave, respectively one hardware supports all Real-Time Ethernet systems - all using the same application interface. A change of functionality is done by just loading an appropriate firmware and adding a software license for master functionality.

Dedicated PC cards, as for CC-Link IE Field or netX 90 based cards, are designed for Slave functionality only.

Real-Time Ethernet & Fieldbus protocols

As specialist for industrial communication Hilscher offers the largest selection of protocols used in the factory automation.

Besides traditional Fieldbusses, all major Real-Time Ethernet protocols are available as Master or Slave.

Device Drivers

For a quick and easy integration Hilscher offers a wide range of device drivers. Besides a C-Toolkit free of charge, drivers for all relevant operating systems, as well as softPLC drivers from 3rd party suppliers, are available.

AREAS OF USE

- Plant control or local machine control
- Independent of the IPC all formats and protocols as Master & Slave
- Same API and drivers for all cards

- · Monitoring and machine operation
- One hardware for all Real-Time Ethernet systems
- Wide range of device drivers

- \bullet For small & compact systems, e.g. smart cameras
- Cards for extended temperature range
- Smallest multiprotocol PC card on the automation market

WHAT'S NEW?

Note: Original size

cifX M.2 & mini PCIe halfsize

- · Smallest multiprotocol PC cards on the automation market
- For small & compact systems with a size of 22x30 mm or 30x26,8 mm
- · Optimized for extended temperature and smallest footprint
- One hardware for all Real-Time Ethernet Slave protocols

AIFX-RE\M12

- · For high protection in harsh environments
- Ratings up to IP67 in customer designs
- Available for all Real-Time Ethernet types with detached network interfaces

²⁾ Slave only 3) also MPI

¹⁾ Master only 4) 2-Channel card available in following combinations: 2ASM, 2DP, 2CO, 2DN, 2DP\CO, 2DP\DN, 2CO\DN 5) Available in Q2/2022

Scope of delivery

A complete software package is always included in the scope of delivery. This package consists of one FDT-based configuration tool (IEC standard) for all products and networks, loadable firmware, documentation and a driver toolkit. Numerous drivers for different operating systems are also available.

Configuration

- · One tool for all products and automation networks
- Configuration of Master and Slave
- Based on common FDT / DTM standards
- Including topology editor for PROFINET I/O IRT Controller
- · Graphical and intuitive configuration tool for a simple and fast commissioning
